STREET CEO / CONNECTED DEMO MVP

From spoken basket to saved sale.

A practical counter assistant. Voice when your hands are busy; typing when you need it.

01 / THE SHOPKEEPER'S PATH

1 / KNOW THE PRODUCTS

Catalogue

Saved names, quantities, prices and stock.
Starter costs are illustrative.

→

2 / BUILD THE BASKET

Manual or Apo

Tap/type, or say:
"Apo one Coke Napo."
No partial unknown basket.

→

3 / ANSWER OUT LOUD

Cash or Bank

Cash: ask amount received.
Verify total and change.
Bank is recorded tender.

→

4 / ONLY AFTER SAVE

Sale saved

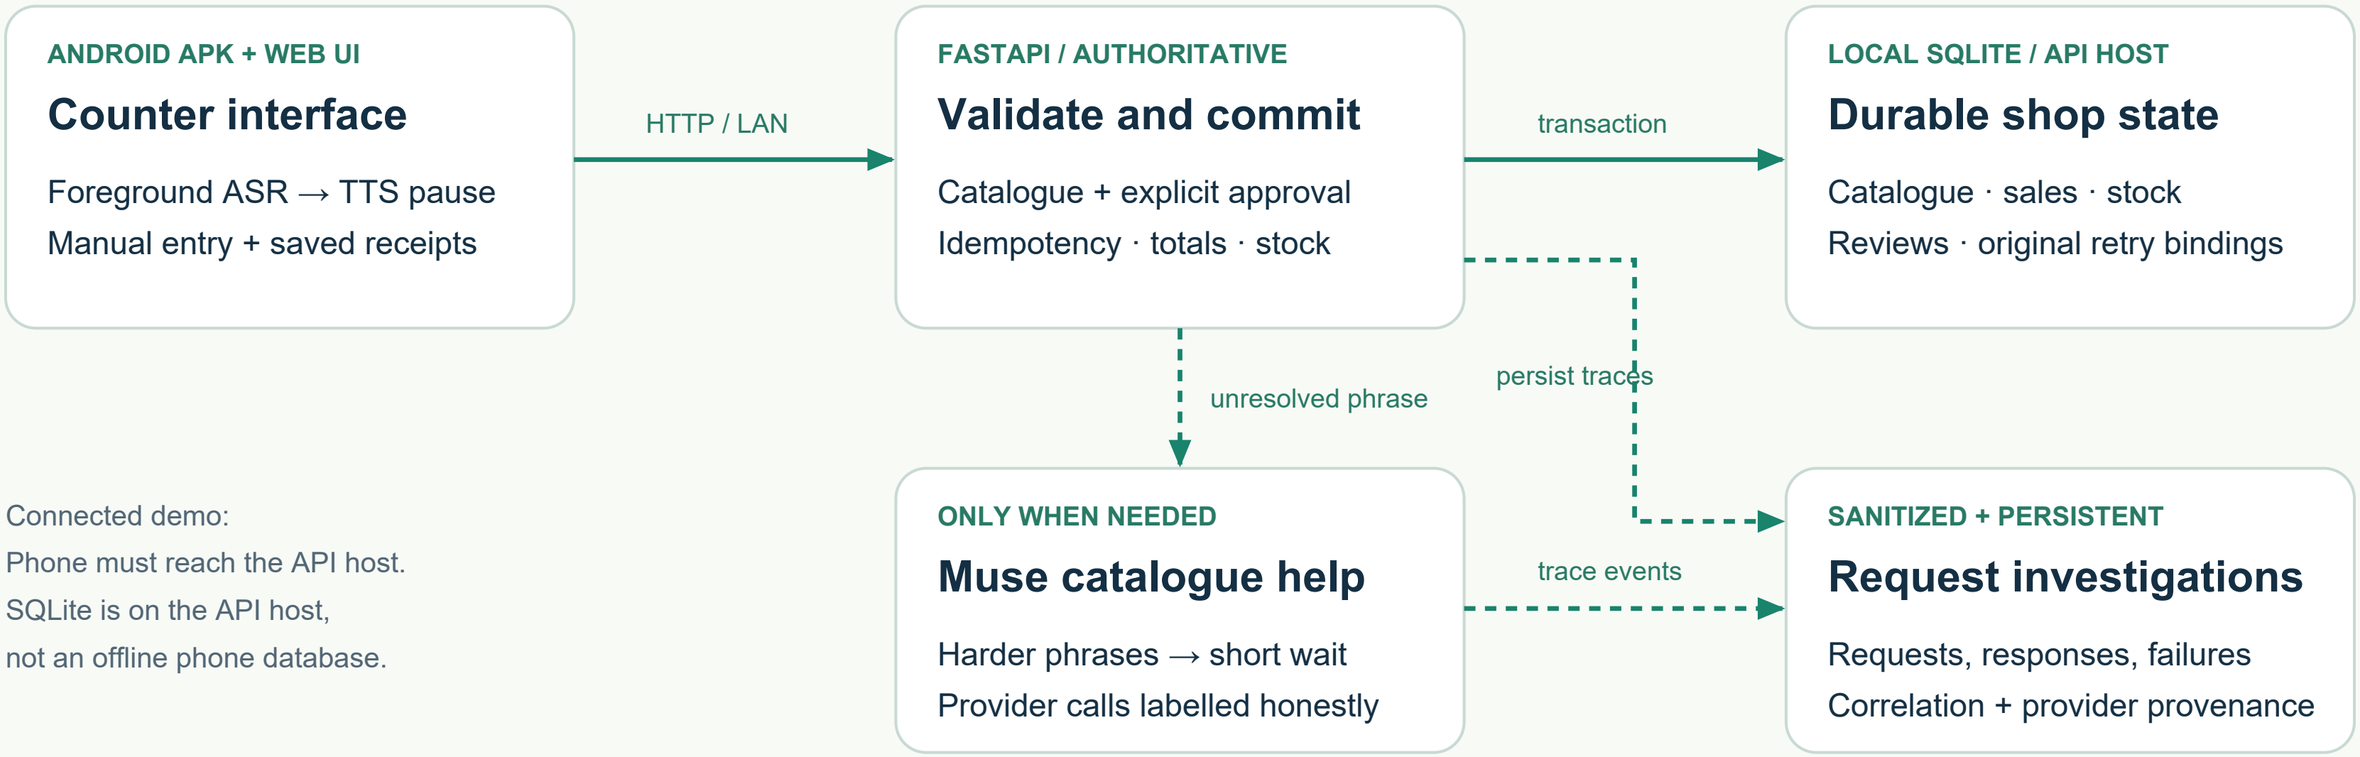

Total · Tendered · Change
Stock and history refresh.
Next Apo starts a new sale.

SUGGESTIONS REQUIRE YES. UNKNOWN IS NEVER A SALE.

A local catalogue proposal or Muse suggestion asks "Did you mean…?" before payment. Missing quantity asks again.

Unknown products are spoken; uncertain paid requests retain the original basket and retry key. No duplicate new sale.

02 / HOW THE CONNECTED DEMO WORKS

Connected demo:
Phone must reach the API host.
SQLite is on the API host,
not an offline phone database.

Scope: catalogue → sale → stock → history. Offline sync and PostgreSQL deployment are deferred.

Source: current demo acceptance + implemented client/API contracts · 2 November 2026 · schematic, not phone test evidence.
